GLOBAL WARMING

The main important aspect of climate change is global warming. Global warming is the process of our Planet warming up.

The temperature of our Planet Earth is raising. This situation caused and will continue causing dangers to humans, animals, plants... and many areas around the Earth.

Some causes of climate change are burning fossil fuels, farming and deforestation.

Some ways that climate change is affecting us are extreme temperatures, floods, rainfalls, changing seasons, no rain, ice melting and rising sea levels.

SCAFFOLDING

- Warming up: increase how hot the planet is.
- Is raising: up, up , up...
- Dangers: risks (peligros).
- Burning: fire.
- Farming: animals in farms (granjas).
- Deforestation: no trees in forests.
