	CONCLUSIONS					CONCLUSIONS			
Like we can apreciate  in Eur	ropean countries, th	e fertility don	't usually get over 2;	and	In Islam's countries, the valu	ues ar bigger; both	pf them, the f	ertility and the child	d mortility. In this
the mortality don't reach de 1.				case, I've choose countries with a large percentege of muslim person, but as a huge continent, Africa					
Both, the fertility and the child mortality, have reduced their averages, comparing each of them				has a lot of different religions with different belives in each one.					
with their values ten years ago, for example Births in Europe, are very securities, and I think thai				at . This values are hight in this countries because, sadly, most of them are Third-Worlds, wich					
because the health service has improve quite a lot, there are doctors that help you throught				means that they are less developed. So the medine there is not as good as most of European					
the entire process, mums stop working some moths before giving birthAlso, a very important				countries. It is easier to contract illness at some of this countries, there is a hight number of child					
thing is the tegnology. During pregnancy, mums take different tests; so it let doctors to				who died because of bad hygiene or bad nutrition. The bad economy is an important point,					
detect hundreds of different dieases and thanks to tegnology, and medicene to,				just for a simple reason, you cannot give your childrens the best of the lifes, when you some					
avoid or treat some of them.					days aren't able to even eat.				
The fertility, on the contrary, is less. But I think that have an explication easy and kind				Unlike Europe, in Muslim's countries is so typical get married and have big families. In fact, women					
of obvious: in Europe, the idea of get married, have kid, mada up a family is been given				who do not have kids, are kind of excluded. Here, you don't have to much choices. You must					
less and less. I think that great, becaus every people can built their on futer live, without				have sons or daugthers, for su	ıre after marriage.				
caring about society. That the economy is not good enought for everybody, evidently				So, even thinking that this is just a small part of the population, values ar highter than					
also influences (we can 't forget that these are just a small number of European countries).					European countries. Because of tegnology, tradition, medicine
