

**NUTRITION  
CLIL Unit 2023/24  
IES Vega de Atarfe**

**THE DIGESTIVE  
SYSTEM ...**

**DIGESTIVE OR  
RESPIRATORY  
SYSTEM?**

**THE RESPIRATORY  
SYSTEM ...**

network of organs and tissues that help you breathe

helps your body absorb oxygen from the air so your organs can

cleans waste gases, such as carbon dioxide, from your blood

is a tract made of passages, or tubes, through which oxygen-rich air and carbon dioxide is expelled

has a pair of spongy organs located in the thoracic cavity on each side of the heart. They are protected by the ribs

needs pleural fluid to help these organs move easily when you breathe

transforms food into nutrients that we use as energy when they reach the body cells and are absorbed

has a track that is a long, muscular tube varying in diameter

<https://blogsaverroes.juntadeandalucia.es/vegabilinguismo/unidades-clil/nutrition/>

has some glands that are located outside the system

<https://view.genial.ly/658b396f1ce8da001431c563/interactive-content-digestive-system>

uses these glands produce the proteins that help breakdown food
